

Gene-wise
summary

The diagram illustrates a data processing pipeline. At the bottom, a light gray rectangular area contains the text 'Table of gene information'. Two vertical green dashed arrows point upwards from this area to two separate coordinate systems. Each coordinate system is represented by a black L-shaped axis. The left coordinate system is labeled 'Gene-wise summary' in blue text. The right coordinate system is labeled 'Sample-specific expression' in blue text. A horizontal green dashed arrow points from the right side of the left coordinate system to the left side of the right coordinate system, indicating a relationship or transformation between the two data representations.
